Fall planted Bulbs Need Food and Care Now

**Due to unusually early Spring Growth,
bulbs must be fed in the Fall.**

Very often when the bulbs which you plant in the Fall do not seem to develop properly in the Spring, there is a simple reason. In many cases the reason is the lack of a good supply of balanced plant food in the Fall and early in the Spring.

For Better Blooms, incorporate with the soil, when you are planting a liberal supply of WOODGRO Dehydrated Cow Manure, Nature's Natural Organic Fertilizer.

Depth at Which Bulbs Should Be Planted

Many of our customers are frequently puzzled to know the proper depth and distance apart at which bulbs should be planted. The accompanying diagram conveys the information much more clearly and briefly than we could describe it. The chart will bear careful study. **Outdoor planting should be done early in the Fall** to secure healthy plants, vigorous foliage and beautiful flowers.

NARCISSUS NATURALIZED

Mixed Narcissus or Daffodils

FOR NATURALIZING IN BORDERS, WILD GARDENS, ETC.

This Special Mixture of all varieties is very suitable for growing in masses for garden decoration, and is particularly adapted for mixed borders, "naturalizing" in shrubbery by woodland walks, in woods by streams and lakes and semi-wild, outlying grounds. All the varieties are perfectly hardy and will flourish and increase for many years. 50 cts. per doz.; \$4 per 100; \$35 per 1000.

Spring Glory. Long, deep yellow trumpet, reflexing at the brim; clear white perianth. One of the best for forcing. 20 in.	15	1 25 10 00

Polyanthus Narcissus

The Polyanthus varieties of Narcissus are deliciously sweet-scented, of the easiest culture, very free flowering, and continue long in bloom, bearing from 6 to 12 flowers each. South of the freezing belt they are splendid for gardens and "naturalize" well. For growing in pots or pans of soil or in shallow dishes in pebbles and water, they are especially adapted and can be had in flower in the house from Christmas throughout the winter by bringing the pots of rooted bulbs in from the frame or cellar every week or two.

Paper-White Grandiflora. All-White Polyanthus. A large-flowering type producing snow-white flowers of large size and good substance in trusses. Much used for early forcing for cut-flowers, being brought in without difficulty by Christmas or even earlier. Jumbo bulbs, 60 cts. per doz.; \$4.50 per 100; \$40 per 1000.

Grand Soleil d'Or. All Yellow Polyanthus. A beautiful variety bearing clusters of golden yellow flowers with orange cups. 15 cts. each; \$1.50 per doz.; \$10 per 100.

Fall Planted Lawns are the Best

"LAWNS-Old and New need attention at this Season"

Fall weather and moisture conditions are favorable for Lawn-making.

THE TIME HAS NOW COME FOR LAWN ATTENTION

Many lawns are in poor condition at this Season, having suffered from heat and drought as well as from competition with weeds and insufficient feeding. Lawns that are not too seriously affected may be renovated by proper Fertilization and a good seeding. On severely injured areas, most satisfactory results will be obtained by plowing or spading the ground and thoroughly cleaning out the weeds. Give the soil a liberal dressing of WOODGRO Pure Dehydrated Cow Manure, 5lbs. per 100 sq. ft., rake it in well, level and roll lawn. Let ground rest for a few days, then sow WOODGRO Special Lawn Seed. We have Grass Seeds for all situations where grass will grow if given proper attention.

SEPTEMBER is the best month for lawn work, but it can be done with good success until the ground freezes.

Consult us concerning lawn problems. A Circular on Lawn Culture furnished on request.

GIANT-FLOWERING CROCUS

Extra-Large Bulbs

These are large, selected bulbs of the best varieties and are noted for the immense size and quantity of their flowers and richness of color. The small, cheap bulbs we do not handle, as they fail to give satisfaction. Plant as an edging to beds, in careless patches in the grass, in masses among shrubs, or on slopes of terraces.

NARCISSE

There is nothing fleeting or impermanent about Daffodils. After they have once been planted, they are with you always, coming up bright and early every year to welcome the spring with their gay yellow and white flowers. If you give them deep, rich soil in full sunlight, and let them alone, they will multiply in numbers and beauty year by year. Do not move them unless they begin to crowd each other too much.

BOTANICAL TULIPS and SPECIES

American gardeners are just beginning to appreciate the beauty of the wild Tulips or species. A wide range of brilliant color is represented in their various forms, and they are very permanent plants when once established. Being natives of southern Europe and western Asia, they are accustomed to hot, dry locations, particularly after blooming-time, and should be given sheltered locations exposed to the sun, with the freest possible drainage.

PARROT TULIP, FANTASY

This magnificent pink Parrot Tulip is a sport of Clara Butt, with the same habits in every way as to color, height, strength of stem, and time of flowering. The flowers are of quaint and beautiful form, the lacinated petals having curious excrescences on the outside. It is not only the strangely exciting form of this Tulip or its main color, which is a delightful warm pink, that enthalls one; it is the inner color of it, a deep and velvety rose-color which is more sumptuous than words can tell. The wonderful encrustation on backs of petals is like an enameling of apple-green. One of the virtues of this wonderful flower is its stiff, straight stem.

Hardy Lilies

The real aristocrats of the bulb world are the Lilies. Plant them deep—6 to 9 inches, except Candidum which should be 2 to 3 inches. They do well among evergreens and shrubs or in the perennial border where the bulbs can have some low-growing bushy plants to protect them. Most Lily bulbs do not arrive in our country until November or December. Where the ground is liable to freeze before Lilies arrive, it should be mulched with leaves or manure.
